RESERVOIR, AIR/OIL (4" DIA x 9")(W/METAL BOWL)

Description

This unit is a reservoir in which you fill it with oil. Compressed air is supply to the top of the reservoir which forces the oil to the bottom of the reservoir, thus suppling oil under pressure to a cylinder or other device. The reservoir has a clear transparent wall for easy visual check of oil levels. This unit is used on all PECO retract systems.(side washer/tire washer/conveyor hydraulic assist)
